DESIGN REVOLUTIONARY PAUL BISHOP ON HIS PLANS FOR THE YEAR

Lucifer Lighting

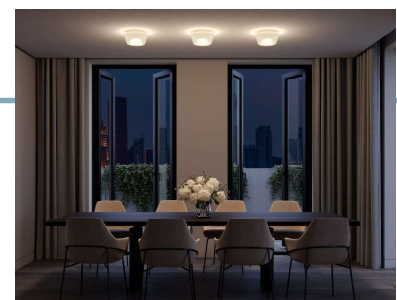

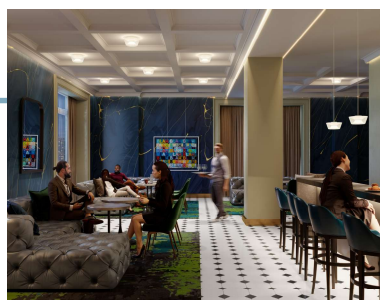

A family-owned business

You'll find Lucifer Lighting products in high-rise hotels and urban financial centres, to flagship retail stores and four-star restaurants, to private homes and specialty museums. Projects of note include Instagram's New York office, London's Natural History Museum and Hollywood's Beverly Hills Hotel.

For 40 years, this family-owned, San Antonio-based company has created industry-leading, precision-engineered lighting solutions for designers and architects to illuminate beautiful spaces in their projects. Among these innovative products is STELLR, a light with a refined silhouette that bridges the worlds of architectural and decorative lighting, offering the perfect solution for residential or commercial interiors. Available in surface or pendant mounted options, STELLR is two products in one, offering volumetric and directional illumination, with the ability to change the appearance and atmosphere of the room.

High-performance features that allow for ever-changing lighting effects include proprietary waveguide technology that appears transparent when the light is off, but then goes opaque when on. A directional downlight draws attention to specific objects or locations for focus and punch. When used together, the fixture creates a luminous ambience with subtle layers of light and shadow.

Further adaptations to mood and atmosphere come via a warm dim Independent adjustment allows easy changes, along with precise control to reflect changes in natural light and space usage and to support circadian rhythms and improve the quality of the interior environment.
